

Mini Project Work

You are a team of data scientists working for an organization that has just acquired a new dataset. The dataset may contain hidden patterns, trends, and actionable insights that could support decision-making.

You are required to:

Explore the dataset thoroughly, discover meaningful insights, apply appropriate data mining techniques, and communicate your findings in the form of a conference-style research paper.

Each group can choose one dataset from the following categories:

Structured datasets

- The Titanic dataset (kaggle.com/c/titanic).
- The UCI Credit Card Default dataset (archive.ics.uci.edu/dataset/350).

Temporal dataset

- The NYC Taxi Trip Records (nyc.gov/site/tlc).

Image dataset

- PlantVillage (available on Kaggle) .

Text dataset

- Amazon Reviews (jmcauley.ucsd.edu/data/amazon).

You are then expected to ask questions, test ideas, justify decisions, communicate insights effectively and prepare a conference paper of the work you have done.

Your paper should include:

- Title and Abstract
- Introduction
- Literature Review (LR)
- Dataset Description
- Methodology
- Results & Discussion
- Implications / Applications
- Conclusion & Future Work
- References
